AFIT Market: visual audit of the existing application

Audit date: 2026-10-12
Repository revision: `3b9180190651ab46395a300a076deddd34188360` (branch `claude/afit-market-phase-0-asm8xd`)
Environment: local Supabase stack + local production build, SYNTHETIC data only. Nothing deployed.

Status: observation only. No colour, layout or design change has been made or is proposed for immediate implementation. **WAIT FOR OWNER REVIEW BEFORE APPLYING COLOUR OR DESIGN CHANGES.**

Summary

- 50 user-facing page routes found; 50 captured at both viewports; 0 partially; 0 not captured.
- 93 page states captured at 360×800 and 1440×900 = 186 original PNG files.
- **Admin side: IMPLEMENTED and working** (16 pages + case detail; reachable only with the right role and a completed TOTP step; real local data).
- Current palette is a **teal-green** (brand #0b5551) with a burnt-orange accent. AFIT crest colours (blue, gold, red, white per the project hand-off) are **not** used, and no crest/logo appears in the app.
- AFIT's website could not be reached from this sandbox (proxy returned 403), so **no colour was sampled** and **no official hex value is claimed**.

Admin-side finding

ADMIN INTERFACE: IMPLEMENTED AND WORKING. A platform administrator who signs in through the normal screen and completes the TOTP step reaches 16 admin pages plus a case-detail page, all rendering **real local data** (counters, queues, lists). Pages: overview, applications, vendors, riders, rider issues, payments, refunds, reports (cases), returns, review reports, background jobs, settings, audit trail, roles, delivery points, categories.

- **Access control observed:** an anonymous visitor is redirected to sign-in; a customer gets a 403 page on /admin; a support agent is refused on /admin/settings; a finance admin is refused on /admin/cases (all captured). Server-side and database enforcement is covered by the automated tests, not by screenshots.
- **Role scoping observed:** the same /admin home shows different counters to support, finance and platform administrators.
- **Limits observed:** on a 360 px phone the bottom bar shows only 5 of the 16 sections (the rest are reached from the home cards); /admin/jobs shows 'never run' because nothing schedules the jobs (accurate, see K56).

Route and role coverage

50 page routes were discovered in the App Router; 50 were captured at both viewports (none missing). 93 page states x 2 viewports = 186 original PNGs. Counting 'a route captured' does not mean every state of it was captured: states that need a real payment redirect, real GPS fixes, a populated rider-offers list, a filed review report, or a pending vendor/rider application were **not** captured (see the Markdown report, section 'Not captured').

Non-page endpoints (API, webhook, receipt PDF) were not screenshotted because they render no interface.

Current colours and AFIT reference

AFIT reference status. The official site (afit.edu.ng) and logo page were **not reachable** from this sandbox (proxy refused the connection; the fetch tool could not resolve the host). **No colour was sampled; no official hex code is claimed; no brand guide was found.** The only statement available is the earlier preliminary finding in the project hand-off: the published crest visibly uses blue, gold/yellow, red and white. That is a visual description, not a specification.

Current app tokens (from src/app/globals.css):

Role	Token	Value
Brand (buttons, links, hero, theme colour)	brand-700 / 600 / 800 / 50	#0b5551 / #0f6b66 / #083f3c / #e8f3f2 (teal-green)
Accent	accent-600 / 700 / 50	#a84a07 / #8a3b05 / #fdf1e4 (burnt orange)
Text	ink / muted	#16211f / #475653
Surfaces and lines	surface / card / line / line-strong	#f5f6f2 / #ffffff / #cfd6d0 / #8c9a94
Status	success / warning / danger / info (text on tint)	#17673a on #e5f4ea; #7a4f00 on #fff3d6; #a3211a on #fdebe9; #1a4a8a on #e6eefa

Alignment (observation): the application is a consistent teal-green product across all roles. It does **not** use AFIT's visible blue/gold/red identity, and it shows no crest or logo anywhere (text wordmark 'AFIT Market' only). Whether using AFIT's identity is permitted is an open approval (external approvals #3). White surfaces and a red for errors already match the reference loosely.

Contrast measurements (current palette)

Calculated with the WCAG 2.x relative-luminance formula from the token values (measured, not estimated).

Pair (measured WCAG contrast)	Foreground	Background	Ratio
ink on surface	#16211f	#f5f6f2	15.22:1
ink on card	#16211f	#ffffff	16.52:1
muted on surface	#475653	#f5f6f2	7.10:1
muted on card	#475653	#ffffff	7.71:1
white on brand-700 (primary button)	#ffffff	#0b5551	8.63:1
white on brand-600	#ffffff	#0f6b66	6.33:1
brand-700 link on card	#0b5551	#ffffff	8.63:1
brand-700 link on surface	#0b5551	#f5f6f2	7.95:1
brand-700 on brand-50	#0b5551	#e8f3f2	7.62:1
white on accent-600	#ffffff	#a84a07	5.76:1
accent-700 on accent-50	#8a3b05	#fdf1e4	6.97:1
success-700 on success-50	#17673a	#e5f4ea	6.08:1
warning-700 on warning-50	#7a4f00	#fff3d6	6.46:1
danger-700 on danger-50	#a3211a	#fdebe9	6.54:1
info-700 on info-50	#1a4a8a	#e6eefa	7.52:1
line-strong border on card (UI 3:1)	#8c9a94	#ffffff	2.93:1
line border on card	#cfd6d0	#ffffff	1.48:1
focus ring brand-600 on surface	#0f6b66	#f5f6f2	5.84:1

Finding: every text pair passes AA (>= 4.5:1). The 'line-strong' border used on inputs is **2.93:1 on white and 2.70:1 on the page surface**, just under the 3:1 recommended for UI component boundaries (WCAG 1.4.11): a measured, minor shortfall. The soft 'line' (1.48:1) is decorative card edging.

Proposed palette (PROPOSAL ONLY - not applied, not sampled from AFIT)

These values are illustrative design proposals chosen only to show that a blue/gold/red/white scheme can meet contrast targets. They are **not** AFIT's official colours and not sampled from the crest. Nothing has been changed in the application.

Role	Illustrative value	Use
Primary (institutional blue)	#1f3d8c / dark #17306f	buttons, links, header, hero
Accent (gold)	#e6b422	highlights, badges - with dark text only
Danger (red)	#a3211a (unchanged)	errors and destructive actions
Surfaces	white / #f5f6f2 (unchanged)	cards, page
UI border	#6f7f78	input outlines (fixes the 3:1 shortfall)

Pair (measured WCAG contrast)	Foreground	Background	Ratio
white on proposed blue #1f3d8c	#ffffff	#1f3d8c	9.98:1
white on blue #24408e darker #17306f	#ffffff	#17306f	12.44:1
blue #1f3d8c link on white	#1f3d8c	#ffffff	9.98:1
blue link on surface #f5f6f2	#1f3d8c	#f5f6f2	9.19:1
ink on gold #e6b422	#16211f	#e6b422	8.59:1
gold #e6b422 on blue #17306f	#e6b422	#17306f	6.46:1
white on gold #e6b422 (avoid)	#ffffff	#e6b422	1.92:1
danger #a3211a on white	#a3211a	#ffffff	7.53:1
proposed UI border #6f7f78 on white	#6f7f78	#ffffff	4.21:1
current line-strong #8c9a94 on #f5f6f2	#8c9a94	#f5f6f2	2.70:1

Gold must not carry white text (1.92:1). Success/warning/info colours would need review so they stay distinguishable from the new primary. A colour change alone would not fix the structural observations in the next section.

Layout, consistency and functional observations

- **Consistent:** one design system across public, customer, vendor, rider and admin shells (same cards, buttons, badges, header); desktop gets a left sidebar, phones get a bottom bar.
- **Phone header is cramped at 360 px:** the 'AFIT Market' wordmark and the 'Sign out' button each wrap onto two lines beside the 'Notifications' link.
- **Desktop landing hero:** the right half of the green banner is empty (no logo, crest or image).
- **Stale wording found:** the vendor dashboard says order handling 'arrives in the next release', although order handling is implemented (the vendor orders page works).
- **Admin on phones:** the bottom bar shows 5 of 16 sections; long dashboard pages (about 10,800 px tall at 360 px) rely on cards for navigation.
- **Data noise:** the public vendor list shows 'Shop shop-xxxx' entries - leftovers of synthetic test data, not a design fault.
- **Capture artefact:** in full-page phone images the fixed bottom bar appears part-way down the page; it is fixed to the viewport, not a layout bug.
- **Signature screen (K27):** the signature surface is a dashed box with no keyboard path; the error 'Please sign in the box before confirming.' is shown clearly; 'Get help from support' is the only alternative.
- **MFA:** the enrolment and challenge screens are clear and plain-language; wrong-code and wrong-password errors are visible.

Blocked, unavailable and not-captured items

- **Blocked: AFIT official website and crest** (network proxy 403): no colour sampling possible.
- **Not captured states:** Paystack redirect/return screens (need the fake provider flow), live tracking card with a GPS fix, populated rider-offer list, filed review report in the moderation queue, pending vendor/rider applications, loading skeletons, offline-in-use state, executed refund states.
- **Not screenshotted:** API/webhook endpoints and the receipt PDF (no interface).
- No page failed to render.

Recommended next steps and approval questions

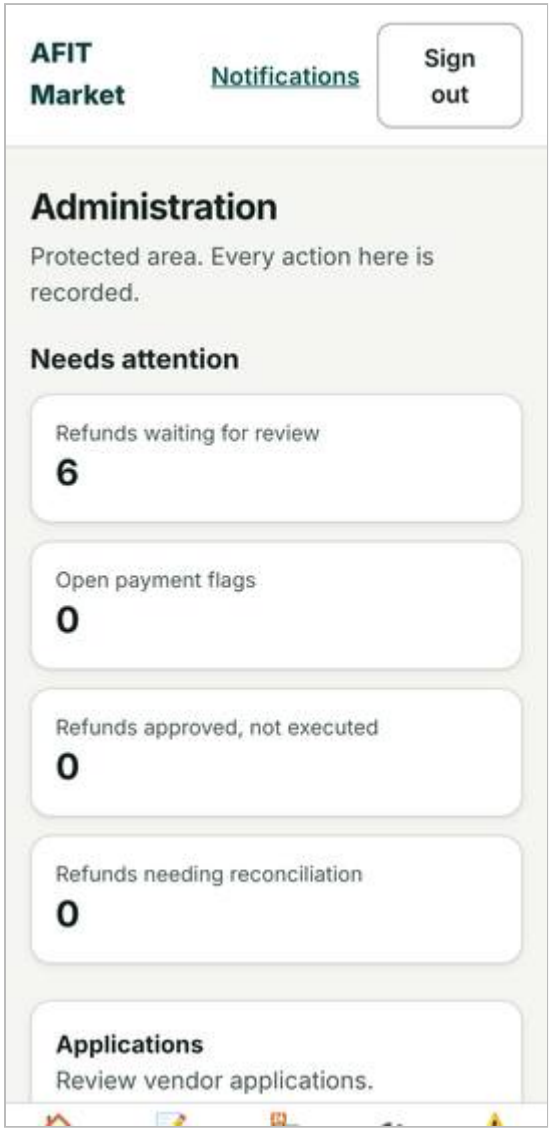

Questions for the owner (no change will be made until answered):

1. Do you want AFIT's blue/gold/red identity used at all, and is AFIT's permission for its name and crest obtained (external approvals #3)? Without that, a neutral palette is safer.
2. If yes: should engineering obtain the official crest file from AFIT to sample colours properly, rather than use the illustrative values?
3. Approve fixing the measured input-border contrast (2.93:1 to >= 3:1)?
4. Approve fixing the phone header wrapping and the stale vendor-dashboard sentence?
5. Do you want a crest/logo placeholder area designed for the header and hero?
6. Should admin navigation on phones expose all sections?

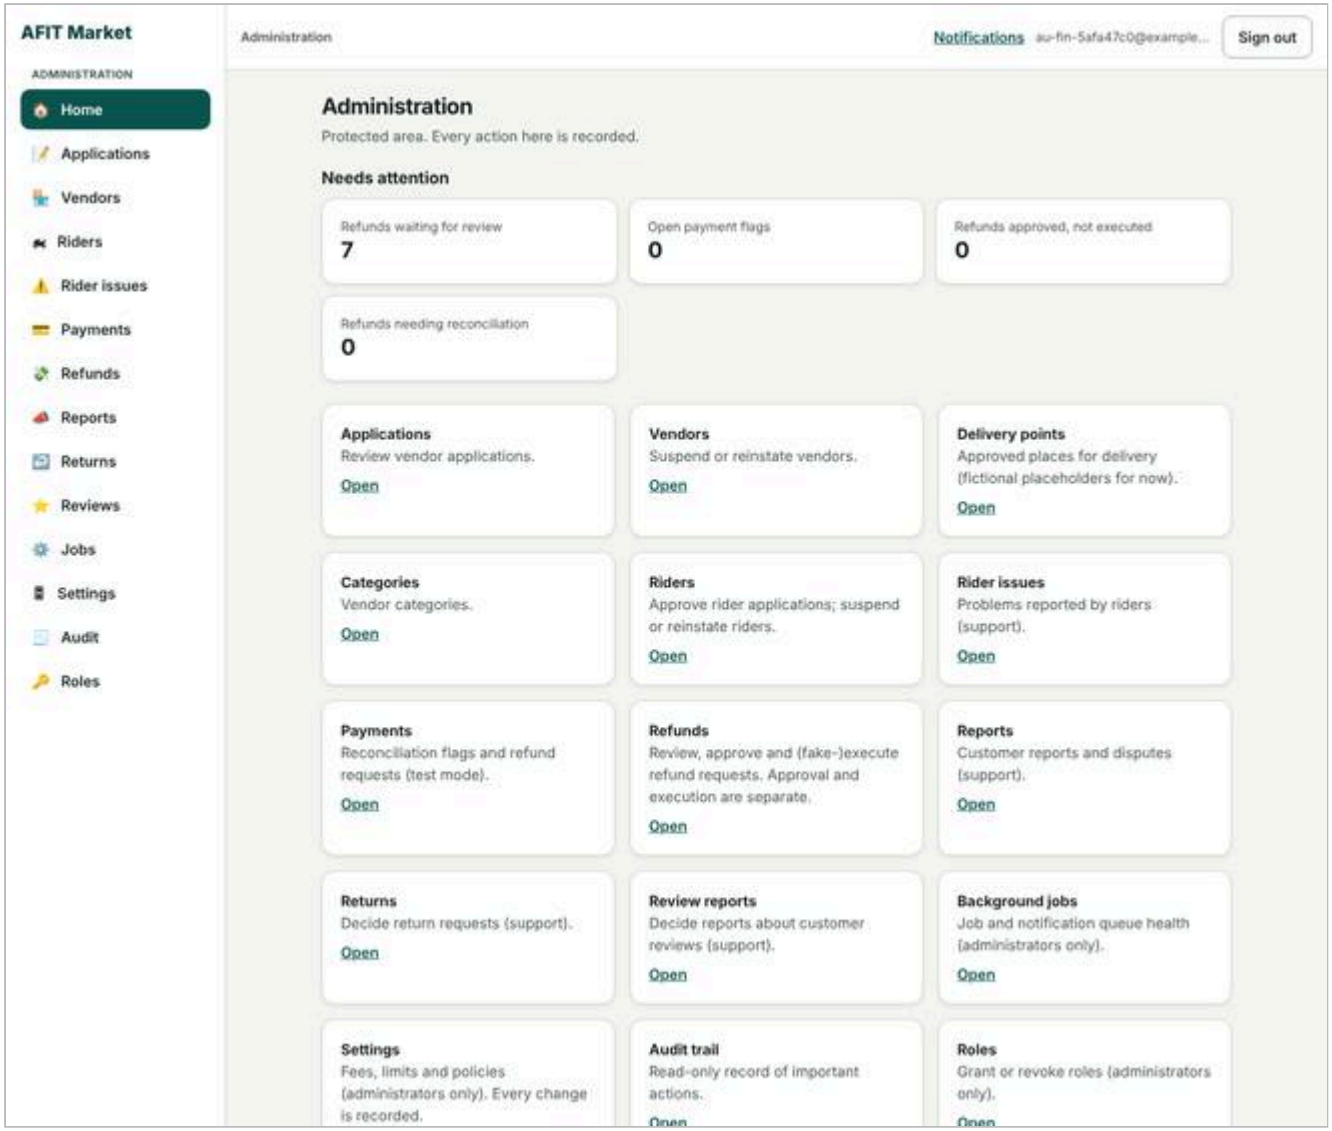

Recommended order: approve direction, then tokens-only colour change, then the header/copy fixes, then re-run this capture for a before/after comparison.
